Question: Strengths of instructor and course	
Great to have real world insight and experiences to work through the class.	
Paul Gillis is an amazing resource, his long and successful career in accounting make him extremely knowledgeable on the subject. Overall, this class was enjoyable.	
Great course taught by Paul. Great to have him at Western during his sabbatical. I liked his style of teaching that was based in bringing in lots of real life examples. Which really helps to make ACC 302 more interesting in that what we are learning has value in our future accounting careers. I'm glad we are taking the final early, helps a lot!	
Knows his stuff! Interesting and engaging lectures! Always relates back to real life situations. Could be a little more organized in giving examples. Test reviews were usually helpful as far as examples. Wish he could stay longer!	
Paul is one of the best professors I have ever had. Such a good time in his classes.	
Dr. Gillis is one of the best teachers I have ever had. With his experience he knows how to relate the class work to the real world. The pleasure of being his student was truly one of a kind. He knows what students need and he knows how to convey the material in a way that is easily learned	
Very experienced and offered a lot of knowledge.	
great stories, really learned alot about the real world. explained the material very well.	
Great professor. Knows what he is doing	
Wonderful professor. Did a fantastic job explaining accounting.	
Question: Instructor and course improved	
Occasionally we did not have enough material to review before the test which made test taking stressful and difficult. Also, sometimes Professor Gillis gets sidetracked and goes on tangents about accounting and the field and we lose class time talking about interesting but irrelevant things.	
A few times was hard at times to know where the course was going and specific test dates.	
More organized in examples	
N/A He's too good!	
No improvement necessary, this class was awesome,	
More guided practice problems	
could spend a little more time on lecturing the material we would be tested on.	
Not really any way to better it	
More hands on examples would be nice.
